Frameworks and Related Standards ITU-T X.1060

2021 FIRST and AfricaCERT Virtual Symposium for Africa and Arab Regions

Presented by Mwende Njiraini, Former Chair, ITU-T SG17 Regional Group for Africa

ITU-T X.1060 OVERVIEW WHAT IS CDC?

X.1060

Title

- Framework for the creation and operation of a cyber defence centre
- Scope
 - X.1060 provides a framework for organizations to build and manage a Cyber Defence Centre (CDC), and to evaluate its effectiveness. The framework indicates how the CDC should define and implement security services to enable an organization's security.
 - This Recommendation is intended for those who is responsible for security at the top management level of an organization, such as Chief Security Officer (CSO) and/or Chief Information Security Officer (CISO), and security supervisors who assist the CSO and/or CISO.

What is "Cyber Defence Centre (CDC)" ?

Definition

 CDC is an entity within an organization that offers security services to manage the cybersecurity risks of its business activities

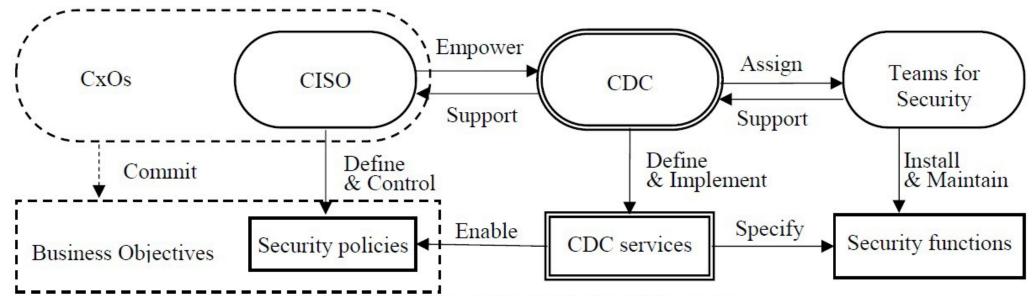

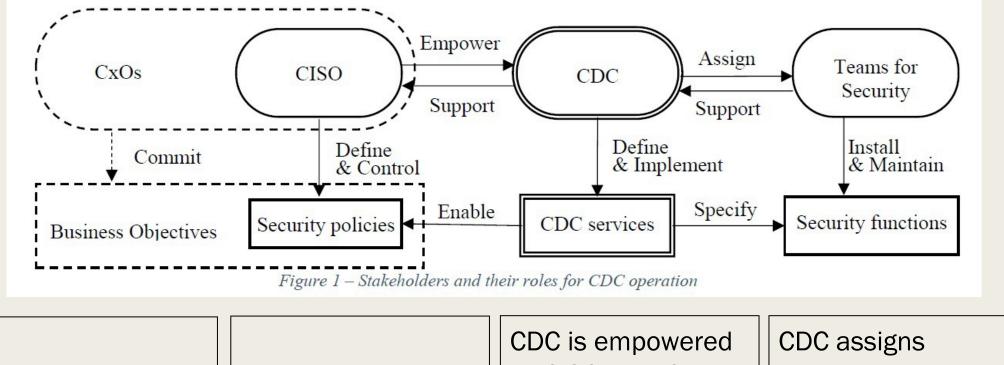

Figure 1 – Stakeholders and their roles for CDC operation

CDC in an organization

	CISO defines and	by CISO to define	resources to
CxOs commit their	controls security	and implement CDC	activate security
business objectives.	policies to manage	services for	functions which
	cyber risks.	enabling security	compose CDC
		policies.	services.

CDC = Broader concept that embraces the existing organizations

- CDC implies new concept
- But it does not mean a new organization it may be performed by the existing functions
- A CDC is existing, if the services in X.1060 are provided and the related organizations works together
- CDC is rather broader concept than CSIRTs or SOCs CDC includes them as a part of the services
- The concept of CDC become so important as an organization to counter broader impacts that are not limited to information systems, caused by cyber incidents

FRAMEWORK FOR THE CREATION AND OPERATION OF A CYBER DEFENCE CENTRE

The framework

- Three processes to maintain security activities
- Build Management Evaluation

Service list	Service catalogue	Service profile	Service portfolio
	▲ Build]	process	
Evaluati	ion process	 Management process 	
Gap	analysis	Phases	Cycles
Asse	essment	Strategic management	Long cycle
Assi	gnment	Operation	Short cycle
Recomme	ndation level	Response

F Collecting, analyzing and evaluating threat intelligence F-1 Post mortem analysis F-2 Internal threat intelligence collection and analysis F-3 External threat intelligence collection and evaluation F-4 Threat intelligence report F-5 Threat intelligence utilization G **Development and maintenance of CDC platforms** G-1 Security architecture implementation G-2 Basic operation for network security asset G-3 Advanced operation for network security asset G-4 Basic operation for endpoint security asset G-5 Advanced operation for endpoint security asset G-6 Basic operation for cloud security products G-7 Advanced operation for cloud security products G-8 Deep analysis tool operation G-9 Basic operation for analysis platform G-10 Advanced operation for analysis platform G-11 Operates CDC systems G-12 Existing security tools evaluation G-13 New security tools evaluation Supporting internal fraud response Н H-1 Internal fraud response and analysis support H-2 Internal fraud detection and reoccurrence prevention support Ι Active relationship with external parties I-1 Awareness I-2 Education & training I-3 Security consulting I-4 Security vendor collaboration I-5 Collaboration service with external security communities I-6 Technical reporting I-7 Executive security reporting luation

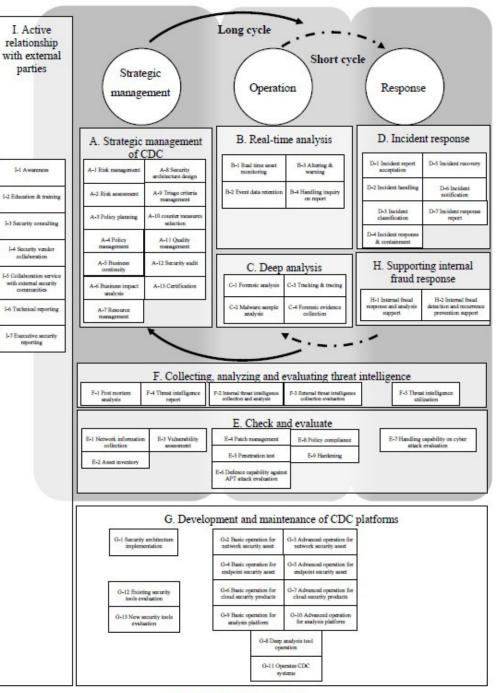

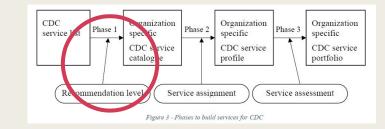

Figure 8 - CDC service categories

11

Build process Phase 1: Making a catalogue

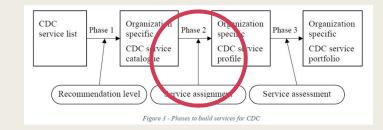

- CDC services from ITU-T X.1060 Annex Select the following level
- You can also define and add services, if necessary

Weight	Description
Unnecessary	Services deemed unnecessary
Basic	Minimum services to be implemented
Standard	Services that are generally recommended for implementation
Advanced	Services required to achieve a higher-level CDC cycle
Optional	Services arbitrarily selected according to the expected form of CDC

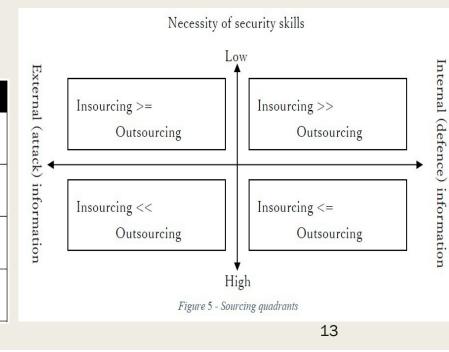

Build process Phase 2: Making a profile

- Determine the specific organization to be responsible for providing each service in the catalogue
- The policy for assignments should be determined with reference to the following types;

Туре	Description
Insourcing	Services are provided by a team within the organization. The organization should specify the team in charge.
Outsourcing	Services are provided by a team outside of the organization. The organization should specify the outsourcer.
Combination	The organization uses insourcing and outsourcing together. A responsible team and a contractor should be specified by the organization.
Unassigned	Although the organization recognises a service, but there is no assignee in the organization.

 Below indicators can be considered types of insource or outsource.

CDC Organization Organi Phase 1 Phase 2 service list specific specif CDC service CDC CDC catalogue profil Recommendation level Service assignmen Figure 3 - Phases to build services for CDC

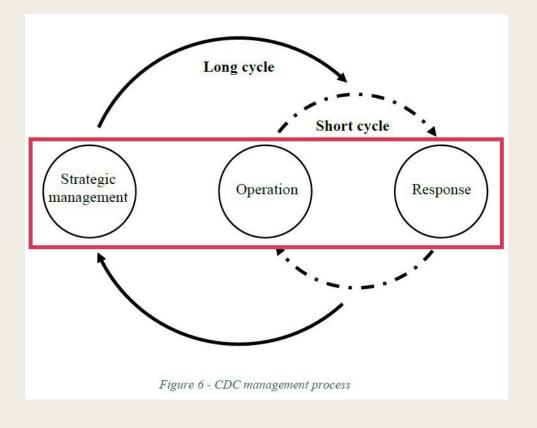

Build process Phase 3: Making a portfolio

- Set the current and target scores according to the assignment status
- The following criteria can be used for reference in scoring

For insource:	1
Documented operation is authorized by CISO or other organizational director who has proper responsibilities	+5 points
Operation is documented and others can play the role of existing operator	+4 points
Operation isn't documented and others can play the partial role of existing operator temporarily	+3 points
Operation isn't documented and the existing operator can play role	+2 points
Operation isn't working	+1 point
Decided not to implement by insourcing	N/A

For outsource:	
Content of service and expected output are understood and their outputs are as expected	+5 points
Content of service and expected output are understood but their outputs aren't as expected	+4 points
Either content of service or expected output isn't understood	+3 points
Both content of service and expected output aren't understood	+2 points
Nether output nor report isn't reviewed	+1 point
Decided not to implement by outsourcing	N/A

Management process - 3 phases

- 1. Strategic management phase
 - Responsibility and accountability for all the strategic services relevant to definitions, design, planning, management, certification, etc. that ensure the long-term development of CDC

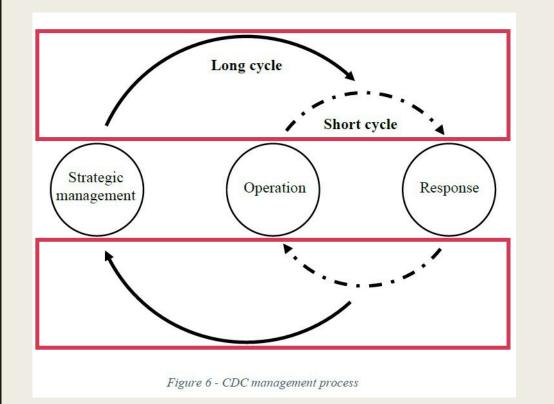

2. Operation phase

- The maintenance of the introduced framework
- The work at ordinary/usual time
- Typically includes routine activities e.g., analysis of incident detection, monitoring and maintenance of security response systems.
- The team is often called "Security Operation Center (SOC)"

3. Response phase

- An incident response should be executed when an event is detected by the analysis
- Always under emergency
- The team is often called Computer Security Incident Response Team (CSIRT)
- The input to the response phase is not limited from the operation phase, but the team should also cover response to reports or notifications from third parties

Management process - 2 cycles

1. Short cycle

- "Operation" and "Response" are performed daily
- Continuous improvement to resolve problems/issues, e.g., simple automation of simple tasks, improvement of tools to analysis accuracy, and review of report items, are necessary within the allocated resources (people, budget, system) in a short cycle.

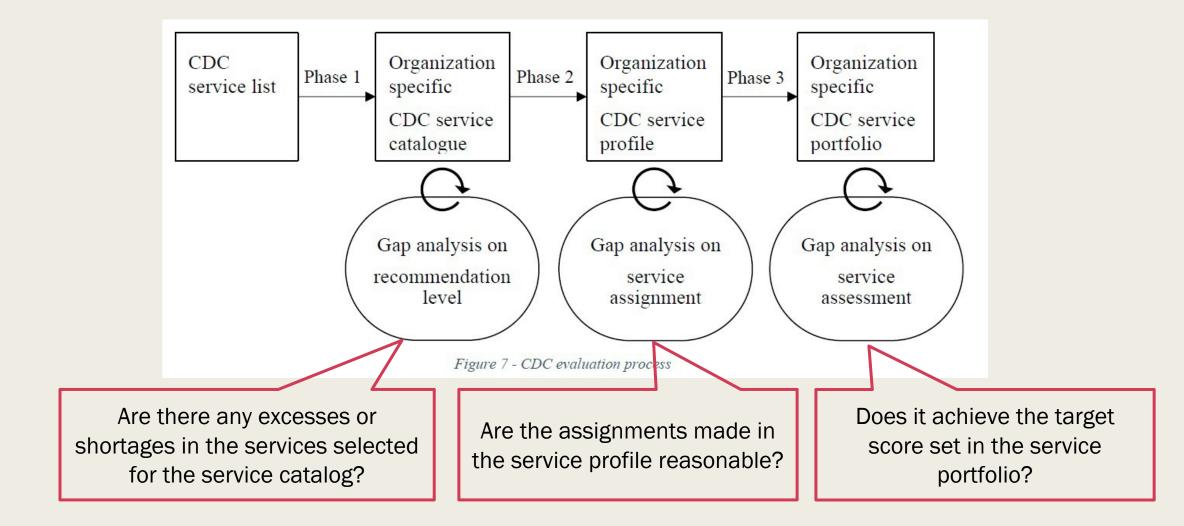

2. Long cycle

- A review that requires the allocation of new resources should be applied to a long cycle.
- If any issues that cannot be solved by the current system are found when reviewing the short cycle, it should be responded with a longterm perspective and plan, e.g., the introduction of a new security product, a drastic review of security policies, and a large-scale configuration change of the security systems

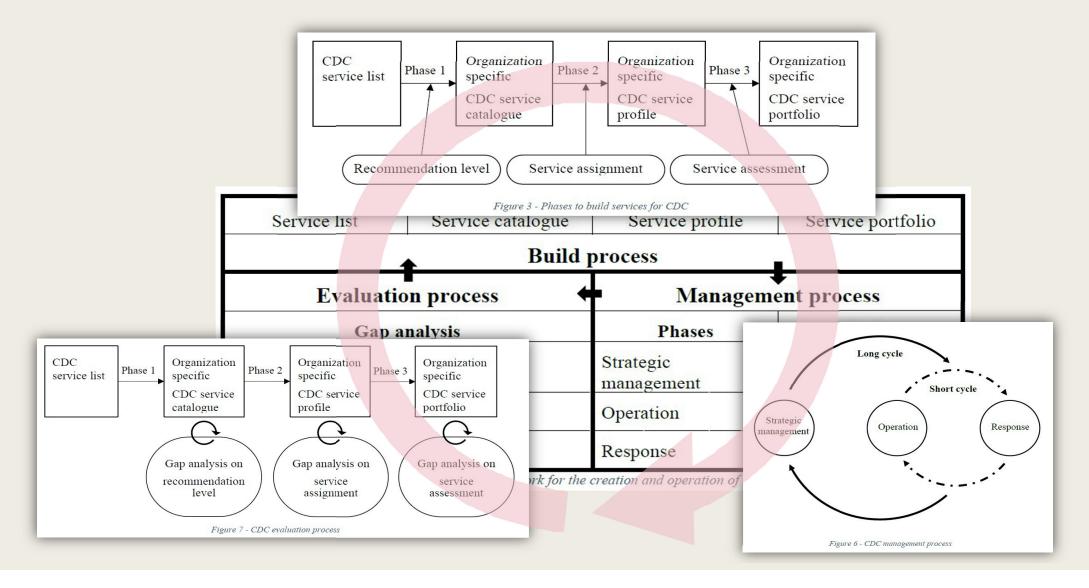

Evaluation Process

Note:

The process of reviewing each of the service catalogs, profiles, and portfolios defined in the Build process
